MARTIN MOKOTLANA MAMADISE

Bachelor of Engineering Technology in Computer Engineering (Honours Student)

+27 72 711 9578 | martinmamadise80@gmail.com | Bellville, Western Cape

PROFESSIONAL SUMMARY

Computer Engineering graduate and current Honours student with a strong foundation in software development, object-oriented programming, and system design. Proficient in Java, C/C++, and Python through academic and project-based experience, with well-developed problem-solving, debugging, and analytical skills. Possesses a solid understanding of software development principles, testing practices, and system behavior, with the ability to contribute across development and quality assurance tasks. Seeking an internship opportunity to apply technical skills, gain industry experience, and grow within a dynamic software engineering environment.

CORE SKILLS

- Java Programming (Object-Oriented Programming, problem solving)
- C/C++ and Python (programming fundamentals and scripting)
- Software Development Fundamentals (SDLC, system design principles)
- Data Structures and Algorithmic Thinking (basic understanding)
- Debugging, Testing, and Code Analysis
- SQL and Data Handling (querying, validation)
- Networking Fundamentals (OSI model, IP addressing, routing)
- Embedded Systems and IoT Development (Arduino, ESP32)
- Version Control (Git – academic exposure)
- Problem Solving and Analytical Thinking
- Teamwork and Communication Skills
- Technical Documentation and Reporting
- Ability to Learn and Adapt to New Technologies

TOOLS AND TECHNOLOGIES

- Git (version control)
- VS Code, Apache NetBeans, CodeBlocks
- MySQL Workbench
- Linux, VirtualBox
- Wireshark, Cisco Packet Tracer, GNS3, VyOS, Postman
- MATLAB (basic), Arduino IDE

PROJECT EXPERIENCE

Smart Agriculture Monitoring System

- Performed functional testing and validation of IoT sensor data
- Verified outputs against expected environmental readings
- Identified faults and inconsistencies in system behaviour
- Documented testing outcomes and supported troubleshooting

Network Virtualization & Routing Labs – GNS3/VyOS

- Tested network configurations and routing behaviour in simulated environments
- Verified connectivity and routing accuracy under different conditions
- Identified and resolved configuration errors through systematic testing
- Analysed network performance and documented results

Brick Breaker WebGL Game

- Tested gameplay functionality including collision detection and physics
- Debugged issues related to rendering and game logic
- Validated system behaviour against expected user interactions

EDUCATION

BEngTech (Honours) Computer Engineering – Cape Peninsula University of Technology (2026 – Present)

BEngTech Computer Engineering – Cape Peninsula University of Technology (2023 – 2026)

National Senior Certificate – Kopa Secondary School (2022)
